

Product Code:

131-1710	Matte
131-1720	Low Gloss
131-1740	Satin
131-1760	Semi-Gloss
131-1790	High Gloss

VISCOSITY:	Zahn #2 signature cup 18 sec at 77°F
FLASH POINT:	-4°F (-20°C)
DENSITY (lb/gal):	8.81
SOLID (% by weight):	36%
SOLID (% by volume):	23%
SHELF LIFE (months):	6

Product Description: Variset 275 is a one-component, pigmented pre-catalyzed Reactive Amino Coating (RAC). This product has been formulated to meet 275 g/l VOC regulations. Variset 275 demonstrates very good moisture, household wear, household chemical and mar resistance. This coating will dry quickly and sand easily. Variset 275 may be catalyzed to further enhance its durability. A recommended primer will be Versaprime® 275 (545-5120).

Special Recognition: Meets Kitchen Cabinet Manufacturer Association (KCMA) Standards.

Recommended: Architectural Woodwork Institute Pre-Catalyzed Lacquer Opaque System (8th Ed).

Uses: Variset 275 is recommended for cabinetry and millwork as well as many other interior wood applications.

Environmental Data (as supplied):

VOC less exempt lb/gal:	<2.26
VOC lb/gal:	<0.8
VOC less exempt g/l:	<275
VOC g/l:	<120
VOC lb/lb Solid:	<0.24
VHAPs lb/lb Solid:	<0.10

See individual compliance sheets for specific data

Application Data:

SUGGESTED USES:	Wood Finish
MIXING RATIO:	100 parts 131-17XX to 1 part 873-1900 *
POT LIFE:	8 hours *
APPLICATION VISCOSITY:	Zahn #2 signature cup 16-20 seconds
REDUCER:	803-1384
RETARDER:	800-5815
CLEAN-UP SOLVENT:	800-5500
RECOMMENDED WET FILM:	3 – 5 mils

* Amount of catalyst required & pot life if material is catalyzed.

Directions for Use

Surface Preparation: Substrate must be sanded using 120, 150 or 180 grit steared paper prior to staining or coating. Primers should be sanded with 280/320 grit steared paper prior to being coated. The primer should be topcoated within eight hours of being sanded. When recoating, the previous coat of Variset 275 must be sanded and the next coat applied within eight hours. Variset 275 cannot be used on metal, old oil or cellulose lacquers.

General Information: Agitate material before use. Variset 275 must be agitated thoroughly at all times to ensure product consistency and consistent gloss. Always mix Variset 275 while adding hardener and reducers in the recommended mixing ratios.

Apply at 3-5 mils wet on sanded substrate. Further coats may be applied after complete drying followed by sanding with 280/320 grit steared paper. The second and subsequent coats must be applied the same day as the previous coat is sanded.

Maximum film build of Variset 275 should not exceed 4 mils dry. Maximum film build of total coating system must not exceed 4 mils dry. Contact with metal surfaces should be avoided.

Variset 275 must not be polluted with oil, varnish or the like and must not be sanded with steel wool between the coats. Variset 275 must not be used and dried at temperatures below 64°F or relative humidity above 65%. During hardening the coating must not be exposed to ammonia vapors. Ammonia cleaners should not be used for cleaning the finished surface. This may accelerate discoloration.

Please note that, as with any other pre-catalyzed product, this material contains, and has the potential to emit, formaldehyde (CAS# 50-00-0). As per the US Department of Labor Standard 29 CFR 1910.1048 covering formaldehyde, section (d)(1)(i) states that "Each employer who has a workplace covered by this standard shall monitor employees to determine their exposure to formaldehyde." Please refer to the OSHA web site at www.osha.gov for further information.

THE CUSTOMER IS RESPONSIBLE FOR FOLLOWING THE RECOMMENDED APPLICATION PROCEDURES. FAILURE TO ADHERE TO THE RECOMMENDATIONS GIVEN IN THIS DATA SHEET WILL LIKELY RESULT IN UNSATISFACTORY FILM APPEARANCE OR FILM FAILURE. THE COMPLETE COATING SYSTEM SHOULD BE CHECKED FOR REQUIRED PROPERTIES PRIOR TO THE START-UP OF PRODUCTION.

Drying Times:

	Room Temperature (68°F)	Forced Drying Schedule (122°F)
Tack Free Time:	10 - 15 minutes	Flash off before entering oven
Dry to Sand:	2 hours	30 - 45 minutes
Dry to Stack:	3 hours	60 - 90 minutes

Note: Dry times are greatly affected by film build, porosity of substrate, air movement as well as heat and humidity. Temperatures are based on actual board temperature. This may vary depending on length of time for boards to reach these temperatures. Minimum curing temperatures of 64°F/18°C must be maintained throughout the curing cycle to achieve the film integrity as stated in product features.

These products are designed for industrial use only. AkzoNobel views safety as a top priority. Please refer to Material Safety Data Sheet for information on the safe use of this product.

Values shown are calculated estimates and should not be construed as product specifications. We cannot anticipate all conditions under which this information and our products or the products of other manufacturers in combination with our products may be used. We accept no responsibility for results obtained by the application of this information or the safety and suitability of each such product or product combination for their own purposes. Unless otherwise agreed in writing, we sell the products without warranty, and users assume all responsibility and liability for loss or damage arising from the use of our products whether used alone or a combination with other products. Use of unapproved or reclaimed solvent blends may reduce film properties and is not recommended.
