### MagicCorner II Blind Corner Solution

by  **KESSEBÖHMER**

MagicCorner II helps utilize hard to access space in blind corner cabinets. With one movement the MagicCorner II is pulled out to reveal two shelves and as they come out two more shelves move into the cabinet opening. Simply slide those rear shelves out, independently, to access the shelves outside the cabinet frame. No more crawling on hands and knees to get at the back of a blind corner cabinet. The SoftStopp ensures that closing takes place quietly and smoothly.

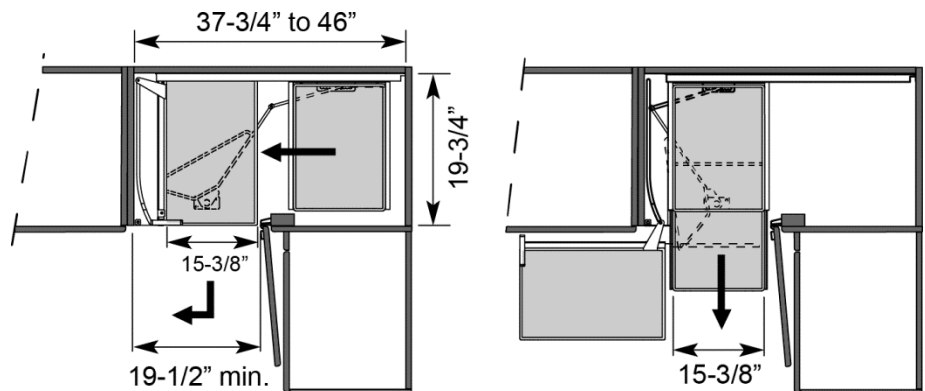

- A smooth and fluid motion brings the front shelves out and to the side while pulling the rear shelves forward for easy access
- Available for left swing or right swing applications
- Patented maple look anti-slip surface
- SoftStopp provides soft closing and keeps items on the shelves
- Minimum door opening width of 19-1/2"
- Load capacity: 20 lbs. per shelf
- Minimum internal height: 20-5/8"
- Durable Silver powder coat finish

Rear shelves extend on full extension ball bearing slides mounted to a sturdy frame.

**ARENA<sup>plus</sup>**  
anti-slip finish
